# Lamarr Energy Tracking

## LET there be Resource-Awareness in ML and AI!

**Raphael Fischer & Sebastian Buschjäger**

Partner institutions:
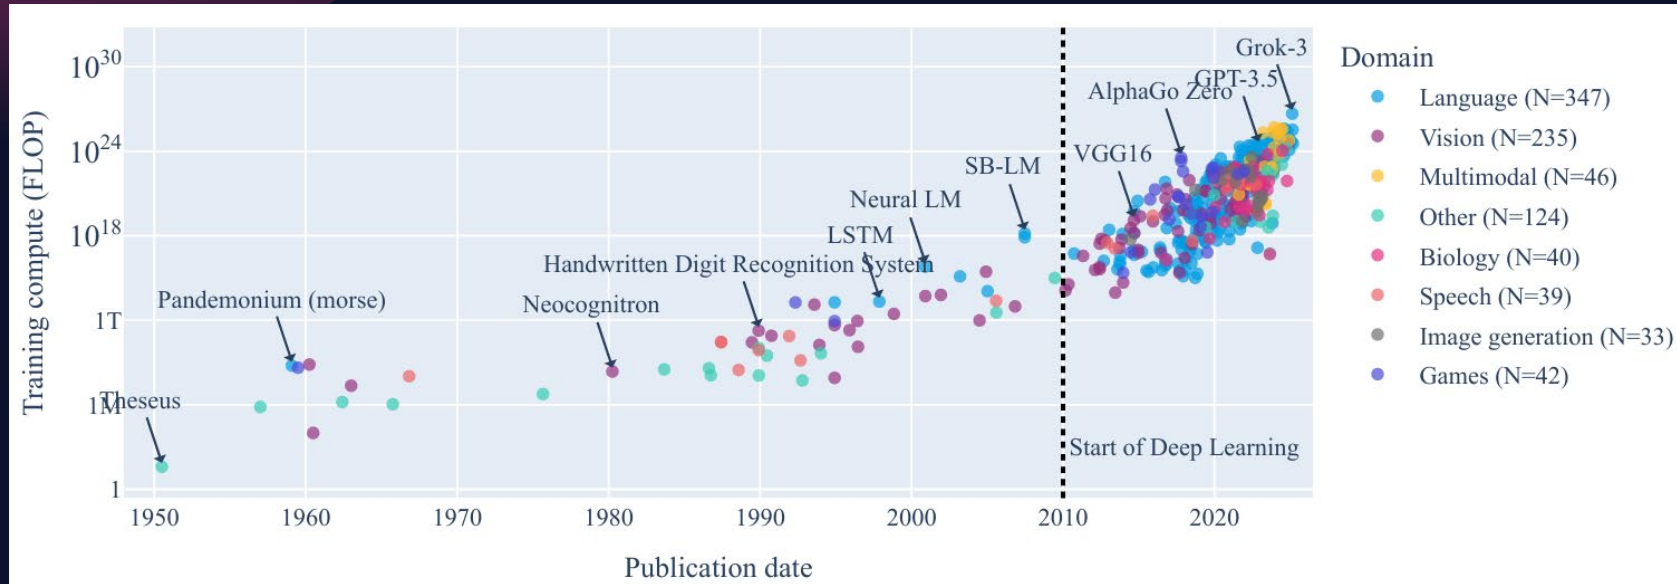

Institutionally funded by:

[Fischer 2025a / Sevilla et al. 2022] (Epoch AI)

→ *Initiate a paradigm shift in reporting!* [Fischer et al. 2024]
This allows us to develop and use AI in sustainable ways!

→ *Challenge the bigger-is-better paradigm!* [Varoquaux et al. 2025]
This should be an important joint effort at Lamarr Institute!

To be **resource-aware** and **trustworthy**, we have to inform on the **energy-versus-quality performance** of our methods! Assessing this trade-off becomes easier thanks to

github.com/lamarr-institute/lamarr-energy-tracker
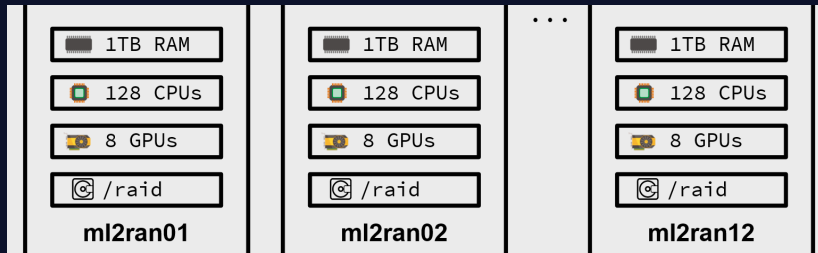

# Computing on the Cluster?

Automatic tracking of energy consumption with personalized reports → launching soon!

# Computing on Custom Setup?

Use the LET library for tracking and reporting the energy consumption of your experiments!

*github.com/lamarr-institute/lamarr-energy-tracker*

# LET - Lamarr Energy Tracker

A simple wrapper around CodeCarbon for tracking and reporting local energy consumption from Python.

## Features

- 🧩 Simple extension to CodeCarbon software
- 👷 Three lines of code to report on environmental impacts of your research experiments
- 💚 Help to make Lamarr Institute more resource-aware

## Installation

As a Python library, you can simply install it by running

```
pip install lamarr-energy-tracker
```

*github.com/lamarr-institute/lamarr-energy-tracker*

```python
from lamarr_energy_tracker import EnergyTracker

# Either use as a context manager
with EnergyTracker(project_name="your_research_project") as tracker:
    # Your resource-heavy code here
    pass

# Or manually
tracker = EnergyTracker(project_name="your_research_project")
tracker.start()
# Your resource-heavy code here
tracker.stop()
```

*"Using CodeCarbon 3.0.8, the energy consumption of running all experiments on an Intel(R) Core(TM) i7-10610U CPU is estimated to 0.135 kWh. This corresponds to estimated carbon emissions of 0.051 kg of $CO_2$-equivalents, assuming a carbon intensity of 380 $gCO_2$/kWh."*
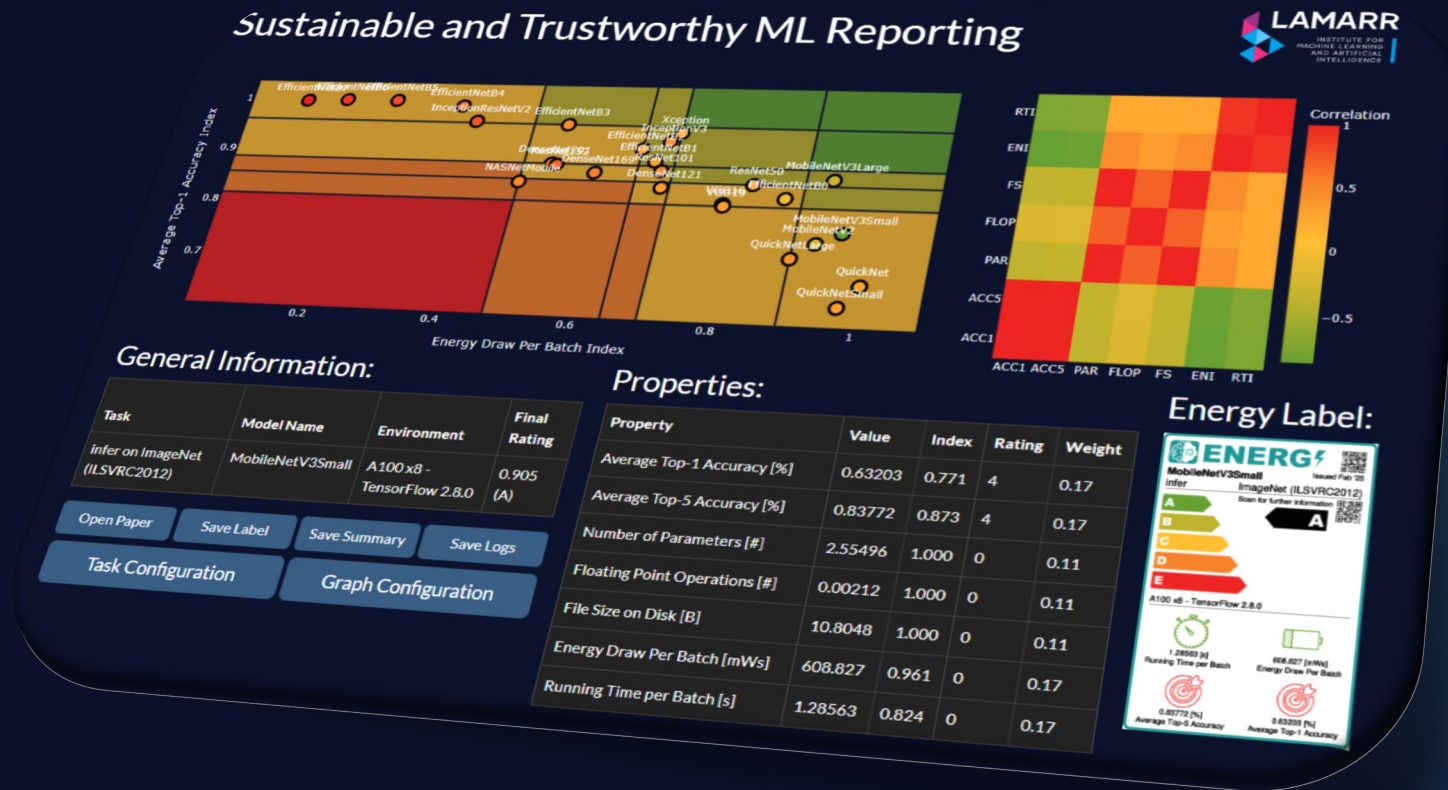

github.com/lamarr-institute/lamarr-energy-tracker

**Resource-awareness benefits:**
- You gain a new understanding of "SOTA"
- You can discuss the efficiency and sustainability of your research
- Your work might become more environmentally friendly
- We can connect different research groups @ Lamarr
- We can become a pioneering research institute for Green AI
- We can perform meta-studies on compute demand

*github.com/lamarr-institute/lamarr-energy-tracker*
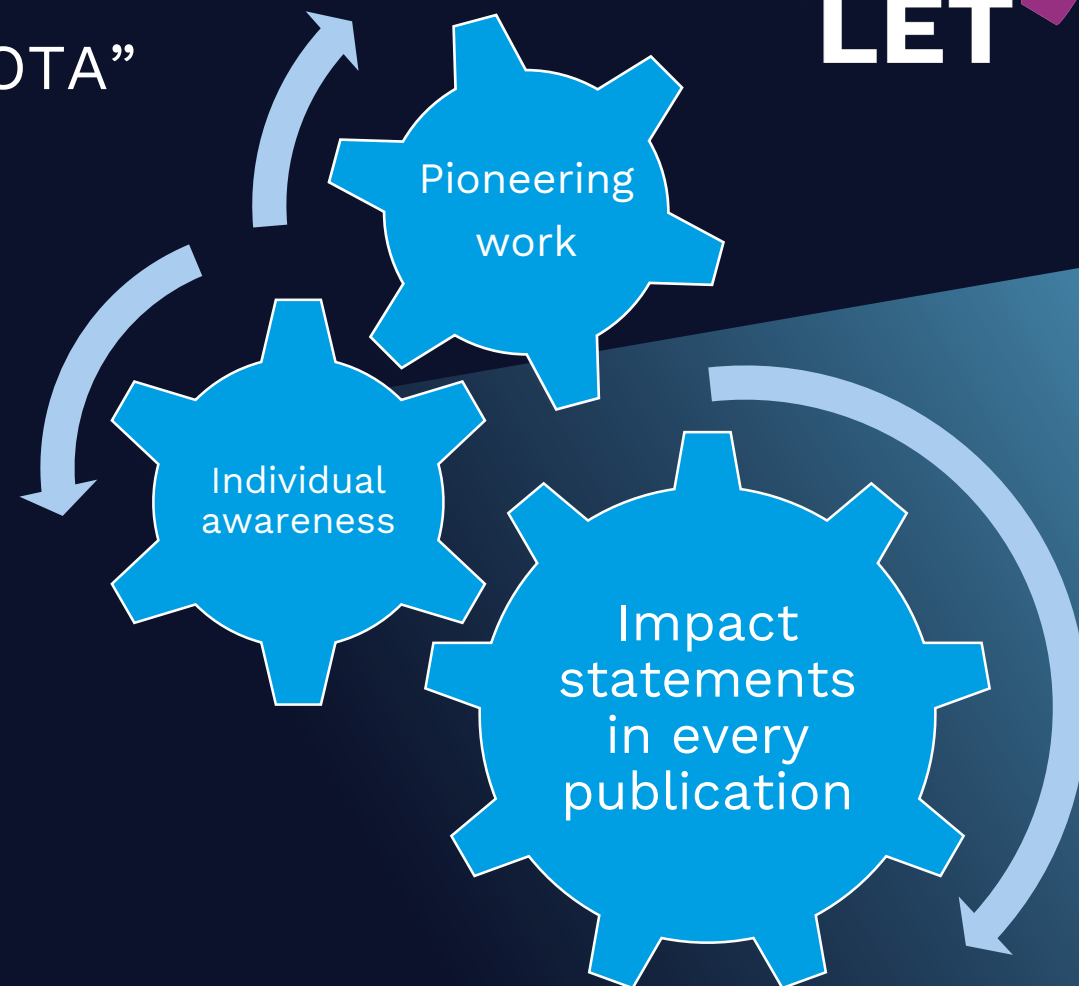

# Integrate LET with Mlflow & STREP

To investigate the multi-dimensional performance of AI models!

github.com/lamarr-institute/lamarr-energy-tracker

TL;DR - LET's all become more resource-aware @ Lamarr!
